

Chapter 3 Workshop - Intro

1. A rigid tank contains 25 kg of saturated liquid water at 200°C. Determine the pressure in the tank and the volume of the tank. Draw the T-v diagram with respect to saturation lines and pressure constant line.

2. A piston–cylinder device contains 4 ft^3 of saturated water vapor at 75 psia pressure. Determine the temperature and the mass of the vapor inside the cylinder. Draw the P-v diagram with respect to saturation lines and pressure constant line.
